Case Study

“Off-Duty” Rep Hits BRF Op

Product: Big Round Filter
Size: 152BRF-12 Designed for 24,000 CFM
Application: Wood Dust and Chips
Customer: Mercer Woodworking - Mercer, PA
Representative: Imperial Systems, Inc.

Challenge

Jeremiah Wann walked into Mercer Woodworking one day to see about getting some kitchen cabinets made for his home. As a Farr APC rep, he quickly put on his sales hat when the conversation about wood-working led to talk about dust collection. As it turned out, this manufacturer of high-end cabinetry was in the market for a collector for their operation.

Solution

Jeremiah submitted a bid for a Farr Big Round Filter with 16 oz. polyfelt bags. All the standard woodworking tools including wide belt sanders, CNC door machining routers and jointers called for an air volume requirement of 24,000 CFM. We were up against DISA (Norfab) on this job, but Jeremiah’s persistence resulted in the order. The unit has been in successful operation since October 2003.

For further information regarding this application, contact Farr rep Jeremiah Wann of Imperial Systems, Inc. at 724-458-1742.
